

✓ YOUR PARKONEER PROJECT SCHEDULE

From project start until usage

Local support makes it easy for you to get started

Do you want to manage existing parking areas dynamically and easily in digital form? Without having to spend a lot of time on planning phases and project plans? We can help you!

With **parkoneer** you benefit from the digital parking solutions of a market leader and at the same time enjoy local support from partners close to you. No matter the location where you are digitally managing your parking space from: **parkoneer** always provides you with a competent partner who has been trained and certified by us.

Find your nearest **parkoneer** partner here.

Managing parking spaces easily instead of managing projects

In this guide we explain the few steps it takes from the first idea to the start of your digital parking management. You will see: It's easy to become a **parkoneer**. So do not hesitate to realise your project idea!

1 Self-test: How do you know you should become a parkoneer?

You should become a **parkoneer** ...

- ✓ if you own or manage parking areas and want to make their management more efficient and easier in the future.
- ✓ if you want to make these parking areas accessible to different groups of parkers at different times.
- ✓ if you want to turn your parking areas into a profit centre by assigning access rights.
- ✓ if you do not want to hire experts for parking management, but are looking for a clever plug & play solution that allows you to take care of this task alongside the job.
- ✓ if you want to improve the satisfaction of your parkers.

2 On-site appointment: We take a look at your parking space

Experts from our local partner will inspect your parking area(s) on-site. The condition of the entry(s) and exit(s) is particularly important for us. Key information that we need is:

- ✓ number of lanes for entrances and exits
- ✓ number of parking spaces
- ✓ number of organisational units that should manage their parking space independently.

3 Your individual parkoneer offer & contract closing

Following the on-site visit, our partner will prepare a transparent offer that covers all items including commissioning and software use. If you agree with the configuration of your parking management, we can agree on a suitable installation date with our partner. Please sign here: contract closing.

4 Ready to go: Plug & Play installation and commissioning

Our local partner installs the compact **parkoneer** hardware for each lane, consisting of barrier, camera and lane assistant, at your location within a few hours. The hardware is connected to the internet via network and you can already enjoy all the benefits of digital parking management. We provide you with quick guides for a fast onboarding of the users. And then you are ready for dynamic parking via number plate recognition!

Congratulations: You are now a parkoneer!
